

Electric Brit is making waves

● Bobber-style Veitis eV-twin targets UK production for 2019

What do you do when you skipper a yacht as a day job but want to be on a motorcycle whenever you reach land? You establish a company building your own bespoke electric motorcycles, that's what.

Veitis is the company Steve Smith established after originally taking a 1953 BSA Bantam and stripping the engine out in favour of an electric motor to create his own test mule. This also meant he had something he could carry around the globe with him as his own personal transport, ensuring he was ready to roll

whenever he steered into port. It was then that the business opportunity idea began to form.

"I started with a petrol-powered BSA Bantam about three-and-a-half years ago," Smith told MCN. "But every time I took it on board the yacht I had to drain out all the petrol, and wrap it all in rags so that it couldn't drip oil everywhere.

"I was thinking about electric vehicles at the time so bought an identical Bantam frame and a cheap electric motor and built my first prototype. It worked really well, and

● **'We're aiming to build and sell 50 in year one'**

VEITIS FOUNDER STEVE SMITH

I kept getting enquiries from people through Instagram who'd seen the bike, asking where they could buy one. So I bought up a load of old frames and

started making new parts for them. Then things escalated from there.

Smith continued: "Me and Malcolm Shepherson (from Metal Malarkey, a custom engineering company based in Shropshire) designed a new frame, and decided how we wanted to do the 'engine'. The batteries are 18x650 Panasonic cells, coupled to a brushless interior permanent magnet Ashwoods motor that's rated to 11kW so that it's actually legal for an A1 licence holder to ride. I'm now working with Ashwoods on a new motor that will deliver 66ftlb torque, too.

"The frames are in Reynolds 631 tubing, wheel hubs are by Talon, the shocks are by KTech, all the billet work is done by Billet World in Derby and we're talking to Maxton about making the forks; so everything is as British as we can make it, while we use Motogadget switchgear, clocks and indicators.

"We're aiming to build and sell 50 bikes in the first year. We've already had a lot of interest from Tesla owners, who understand the benefits and want a two-wheeled option."

The eV-twin is available to order now, with the first bikes due to be built in the New Year."

Electric firm's funding hunt

Curtiss Motorcycles, previously known as Confederate, announced a while back that they would stop building petrol burners and focus on electric bikes instead, namely the Zeus Bobber and Zeus Café. And now they're looking to raise some investment capital to push the business forward. Want to buy in? Head to wefunder.com/curtiss to find out how you can invest.

Last of the line

The last V-twin 1299 Panigale Rs have rolled off the production line in Italy and are being delivered to dealers now. Limited to 1299 bikes, this pinnacle of V-twin development and high-end cycle parts costs a whopping £34,995, but is set to be perhaps the most collectable Ducati of the modern era.

Dirty Triumphs

Triumph have announced dates for their 2019 riding courses at the Triumph Adventure Experience in Wales. The purpose-built centre caters for all abilities and offers a range of courses, whether you're a muddy first-timer, or a bit of a pro. Courses run from April to October 2019, with prices starting at £299 and rising to £649 for their two-day course.

Impressive spec includes Motogadget switches and clocks

In-house built, V-twin style electric motor produces 11kW

HIGHLIGHTS

- 100-mile range
- A1 licence-friendly
- 70mph top speed
- 165kg rolling weight
- £40,000
